Crane Games

by Aidan

Crane game machine

When I was young, crane games were very popular. You could usually find them at festivals or carnivals and in game arcades. Although they went out of fashion for a time, they are experiencing a resurgence in popularity and you can see them all over the place. In many Korean downtown areas, it is not uncommon to see many shops containing them. Have you ever used one and wondered why the claw seems to grip a prize firmly and let it go at the last second? That's because it sometimes does! It is a well-known trick that owners use. The claw's grip strength varies depending on how many times it has been since somebody won!

The claw cheats!

Brawl Stars

Do you play phone games? These days, it seems almost everybody does. Big or small, young or old, it doesn't seem to matter. You can find people playing games in restaurants, on buses and trains, and even sometimes when they're walking in the street! These games are easy to play for short periods of time and are often fun to play with your friends. Games like Roblox are so popular now that many students like getting in-game currency, called "Robux", for their birthday or Children's Day presents! Do you like playing phone games?

My Favorite Game Series

by Aidan

Dark Souls is my favorite series

Are you a fan of gaming? If so, do you have a definitive favorite franchise? Mine is undoubtedly *Dark Souls*. This series of action RPGs is developed by the renowned Japanese studio FromSoftware, commonly referred to as "FromSoft".

The games revolve around navigating treacherous environments to confront and vanquish formidable bosses guarding precious items or guarding the gates to mysterious paths. While the series is notorious for its punishing, occasionally brutal difficulty, its true brilliance lies in its profound character design. The lineup of enemies is remarkably diverse and memorable, ranging from colossal mechanical spiders to knights consumed by malevolent abyssal sorcery, and even venerable monarchs who have descended into madness after aeons of isolation. Though these titles demand immense perseverance and tactical precision, the sense of accomplishment they provide is, in my view, unparalleled and deeply rewarding.

The bosses are cool!
